The Integral System of Spanish Fisheries Management: Computer tools at the service of Surveillance and control.

DAVID PODEROSO GODOY

GENERAL SUBDIRECTORATE FOR FISHERIES SURVEILLANCE AND FIGHT AGAINST ILLEGAL FISHING

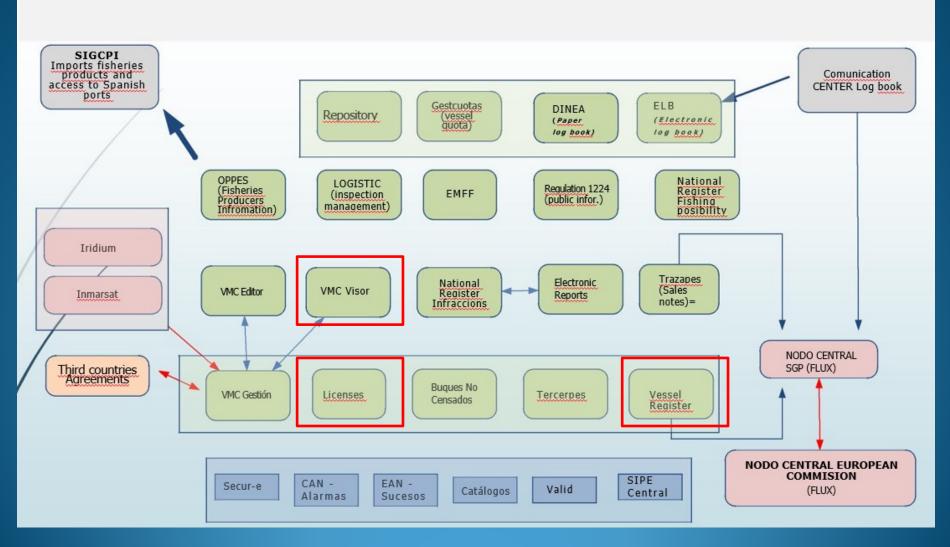

Introduction

- The Spanish Fisheries Information System (SIPE) began to be built to <u>unify all the information systems that were in the</u> <u>General Secretariat of Fisheries</u> as individual systems and, in turn, incorporate the new functionalities that were continuously required by the Commission and the General Secretariat of Fisheries itself.
- Powerful tool, in continuous evolution at the service of control and inspection.
- It allows a global and comprehensive control of the fishing activity.
- Useful for the entire General Secretariat for Fisheries, Autonomous Communities and the sector itself.
